Gig Credit AI

AI-Powered Credit Access for India's Gig Economy Workers

A Hackathon Innovation Project

The Gig Worker's Financial Challenge

The Reality

Gig workers face significant barriers to financial inclusion:

- No traditional salary slips or fixed income proof
- Irregular earnings that vary week to week
- Limited or non-existent credit history
- Difficulty qualifying for bank loans

Over 15 million gig workers in India lack access to fair credit.

Made with GAMMA

Our Solution: AI-Driven Financial Inclusion

Alternative Data Analysis

Uses gig income patterns, expenses, and bank statements instead of traditional credit scores

Reliability Score

Calculates unique eligibility score based on actual financial behavior and activity patterns

Bank Matching

Connects gig workers with right bank loan options tailored to their specific eligibility

GigCredit AI democratizes credit access for Swiggy partners, Uber drivers, Rapido riders, freelancers, and all gig economy participants.

Made with GAMMA

Core Platform Features

Loan Eligibility Score

AI-powered calculation using alternative financial signals

Loan Product Matcher

Identifies best-fit loan options from partner banks

What-If Simulator

Scenario analysis to understand eligibility improvements

AI Financial Assistant

Chatbot provides guidance in simple, local language

Expense Tracker

Categorizes spending and calculates monthly patterns

Document Checklist

Educates users on prerequisites in their language

Made with GAMMA

Smart Expense Tracking & Analysis

How It Works

Users categorize daily expenses through intuitive interface:

- Fuel and vehicle maintenance
- Food and groceries
- Rent and utilities
- Mobile and internet

AI calculates total monthly expenses, estimates savings potential, and assesses financial reliability.

Contribution to Loan Eligibility: Expense patterns directly feed into reliability score calculation and collateral estimation for different loan types.

How GigCredit AI Works

Data Input

User enters finances and gig patterns

AI Analysis

Analyze income, expenses, bank statements

Reliability Score

Generate score and eligibility assessment

Collateral Estimate

Estimate collateral by loan type

Loan Recommendations

Suggest best bank options and benefits

End-to-end automation ensures seamless experience from data entry to loan recommendation.

Made with GAMMA

Technology Stack

Frontend

- React + Vite for blazing-fast rendering
- Tailwind CSS for modern UI components
- Responsive design for mobile-first users

Backend

- Node.js + Express for API handling
- Supabase for database and authentication
- RESTful architecture for scalability

AI & Automation

- OpenAI API for intelligent analysis
- n8n workflows for automation
- Bank statement AI analyzer

Infrastructure

- Vercel for deployment
- Real-time data processing
- Secure data handling

Made with GAMMA

Who Benefits & How

For Gig Workers

- Easier loan access without traditional credit history
- Financial awareness through expense tracking
- Transparent credit evaluation based on real behavior
- Personalized financial recommendations
- Loan repayment reminders (10, 5, 3 days, final)
- Education on prerequisites in simple language

For Banks

- Better risk assessment using alternative data
- Access to underserved gig economy customers
- Reduced fraud through AI detection
- Automated eligibility verification
- Reliability level report with user activity details
- Score history timeline for trend analysis

Made with GAMMA

Future Roadmap & Vision

Blockchain Credit Ledger

Immutable credit history verification via decentralized protocols

Gig Platform Sync

Direct API integration with Swiggy, Uber, and Rapido

Automated Wealth Tools

Tailored micro-savings and investment product offerings

Employer Partnerships

Payroll-linked financial benefits for gig workforce

Empowering the Gig Economy with AI-Driven Financial Inclusion

GigCredit AI is building the future where every gig worker has equal access to financial opportunities.
